This is a simple example, this will show different font sizes and also DIFFERENT FONT STYLES.

In this example the $\overset{\ }{huge}\ font\ size$ is set and the Foot note size also. There's a fairly large set of font sizes.

In this example, a command and a switch are used. A command is used to change the style of a sentence.

A switch changes the style from this point to the end of the document unless another switch is used.

Part of this text is written in different font style to highlight it.
